Australian Company Changes the Game – A New Solution for Global Worker Risk

Risk Dollarisation - a breakthrough financial approach for worker health and safety management

September 4, 2017: Australian company **Manage Damage** presents their innovative approach to reducing costs of worker insurance to global business today in Singapore at the 2017 World Congress on Safety & Health at Work. The Congress is jointly organised by the International Labour Organisation (ILO) and International Social Security Association (ISSA), bodies of the United Nations.

Jillian Hamilton, Managing Director of Manage Damage, has been selected to introduce their unique approach within the symposium '**Prevention pays! The role of accident insurance and the return on work reintegration**'. The Manage Damage methodology of analysis is of interest globally as countries seek to find ways to strengthen sustainability to the global supply chain.

"Business, international labour organisations and governments have struggled to find ways to clearly define the true cost of non-financial risk as they seek to build a stronger global workforce, our methodology is a world first to provide in fiscal terms that prevention pays," said Hamilton.

"We are proud to be one of only two private companies invited to speak to Work Health and Safety experts from around the world as business and international labour organisations look for new ways to strengthen the global workplace."

Manage Damage is an Australian based risk advisory firm that solves non-financial risk with a financial approach.

Non-financial risk targets those areas that are not measured in financial terms - the support and shared services in an organisation. The full financial position of these services is not usually known as all associated costs are either not identified or hidden across operational or financial structures.

The Manage Damage process analyses the cost such as safety, health, environment, quality and human resources across the whole of business and converts this information into financial terms to be easily addressed by boards and senior leadership.

"Manage Damage is about reducing risk across the whole of a business. We call our philosophy '**Risk Dollarisation**'. We have developed a methodology that converts non-financial risk into dollar terms to enable management to more easily address the complex interplay of these factors within a business and reduce associated costs. Management can see where issues lie and where true associated costs are located," said Hamilton.

By assessing a company's risk portfolio via the cost of damage they are able to better manage and reduce the costs associated with risk. Companies obtain complete visibility of true damage costs and opportunities to manage the damage are highlighted. This unique approach to 'dollarising' risk reduces the cost of damage and the negative impact on a company's bottom-line.

"We are seeing great interest from both large business and government globally in our approach. This is an area which has been pushed into the too hard basket by management as it has been difficult to address in clear fiscal terms. Our methodology solves this problem."
